

INTEGRATED MANAGEMENT SYSTEM POLICY

QUALITY, ENVIRONMENT, OCCUPATIONAL HEALTH AND SAFETY, SUPPLY CHAIN SECURITY AND ENERGY

At UNACEM Perú S.A., we manufacture and market clinker, cement, and other construction materials, as well as provide port services.

Our Integrated Management System promotes the continuous improvement of performance by ensuring the availability of information and resources. It also establishes objectives and targets aimed at achieving operational excellence, energy efficiency, and the progressive decarbonization of our operations by prioritizing the replacement of energy sources with lower-carbon alternatives and the reduction of greenhouse gas (GHG) emissions.

To this end, we are committed to:

Ethics

- Promote and ensure compliance with the Grupo UNACEM Code of Ethics and Conduct among our stakeholders.

Quality

- Meet our customers' requirements, as well as those established by the organization

Occupational health and safety

- Provide safe and healthy working conditions to prevent work-related injuries, ill health, diseases, and incidents arising from our activities.
- Ensure that workers are considered, consulted, and actively participate in a constructive manner in the Occupational Health and Safety Management System, promoting interdependence through visible leadership, commitment, and zero tolerance for non-compliance with safety standards.

Supply Chain Security

- Ensure the security of our supply chain at the port terminal by preventing the use of our operations and facilities for illicit purposes.

Energy

- Support the procurement of energy-efficient products and services, as well as energy performance-oriented design, in order to accelerate the transition toward a low-carbon operation.

Environment

- Protect the environment and prevent pollution by adopting a life cycle approach and reducing our environmental footprint. To this end, we prevent, control, and mitigate the environmental aspects generated by our activities, including particulate matter emissions, water and raw material consumption, land use, fuel consumption, and greenhouse gas (GHG) emissions, among others. We also promote the energy transition through the gradual replacement of fuels and energy sources with lower-carbon alternatives, increased use of electricity from renewable sources, and the continuous improvement of thermal and electrical efficiency across our processes.
- Promote environmental sustainability through the efficient use of resources, as well as the conservation of ecosystems and biodiversity.

Legal

- Comply with the legal requirements applicable to our activities, as well as the requirements established by our management systems and other commitments and obligations voluntarily adopted by the organization.

The success of our management relies on the harmony, capabilities, and commitment of the people who work at **UNACEM Perú S.A.**

Eduardo Sánchez

General Manager UNACEM Perú S.A.
